

CIRPA 2022

CONFERENCE PROGRAM

OCTOBER 23-25
BURNABY, BC

FROM INSIGHT TO ACTION

Connect, Share, Learn and Grow

We proudly host the largest community of Canadian admins & users in Higher Education who connect regularly to share best practices and discuss new ideas around learning experience and teaching effectiveness. That is why the majority of **Canadian U15 member** universities have placed their trust in us.

HOW DID WE DO IT?

We partner with Higher Ed institutions every step of the way with a fully automated customized solution & industry-leading integration capabilities.

ABOUT OUR COMMUNITY:

Our Bluenotes community brings Blue users together all across Canada to connect, share, learn and grow to optimize the value of the fact based feedback data.

Want to support your student success initiatives across their full educational journey?

To learn more about a Bluenotes Chapter near you, join us at

LETTER FROM THE PRESIDENT

We respectfully acknowledge that we are guests on the ancestral, traditional, and unceded territories of the xʷməθkʷəy̓əm (Musqueam), Skwxwú7mesh Úxwumixw (Squamish), salilwətaʔ (Tseil-Waututh), qícəy (Katzie), kʷikʷəłəm (Kwkwetlem), Qayqayt, Kwantlen, Semiahmoo and Tsawwassen peoples, and have been stewarded by them since time immemorial. We also recognize that you are joining us today from many places, near and far, and respectfully acknowledge the traditional owners and caretakers of those lands.

Dear Colleagues and Friends,

I am pleased to welcome you to the 2022 CIRPA Conference! This is CIRPA's first hybrid conference ever and we are excited about the opportunities of reaching a wider audience with both online and in-person options. This year's conference theme, "The Evolution of IRP – New Directions in Post-Secondary Education," moves us forward and highlights inventive and socially significant inquiries and innovations in institutional research and planning. The conference theme resonates throughout the program with the contributions of our members who have stepped up to share their knowledge, experiences, and expertise both in-person and virtually.

We are certain that this year's conference will provide a platform for our delegates to share experiences and knowledge through several sessions, workshops and activities. Our opening keynote speaker is Mr. Ian Cull, who recently retired from his position as Senior Advisor on Indigenous Affairs and was formerly Associate Vice President Students, University of British Columbia. Ian is a member of Dokis Indian Band located on the Dokis Indian Reserve in Ontario, Canada. He will share his reflections on how his relationship with institutional research has contributed to informing campus decision-making and planning at a time of significant growth and change. This year's conference will conclude with a keynote address from Dr. Lyn Bartram, who is a professor in the School of Interactive Art and Technology at Simon Fraser University and Director of the Vancouver Institution of Visual Analytics. Lyn will share her insights on how we can use interactive data visualization to consider ways to think with and about data for richer understanding. The keynote speeches will be available to both in-person and online delegates.

We are very grateful for the conference planning work done by our conference co-Chairs Kristi Hoffman (University of British Columbia), and Zareen Naqvi (Simon Fraser University), as well as their teams of volunteers who have supported the planning and organization for this hybrid event. Each year, on behalf of

our presenters, CIRPA-ACPRI donates to a charitable organization. This year, the conference organizers have selected the Vancouver Humane Society. Since 1984, the Society has been a registered charity dedicated to the humane treatment of animals. Over the past few years, many of us have benefited from the companionship of our pets while working from home, as well as health-related benefits including reduced anxiety, stress and loneliness. We are excited to support such a commendable organization for their ongoing support in helping animals in need. The conference organizers have worked hard to provide a wonderful interactive hybrid conference this year. Thank you all for your hard work and imaginative contributions!

We are excited to use the Virtual Attendee Hub platform to host the virtual side of our conference and enhance the in-person experience this year. Virtual attendees will be able to connect directly to live presentations with the click of a button. Everyone can view the full schedule, create a personalized schedule, and complete the session evaluations. There is also an "on demand" area to view video content and session recordings after the session has ended. Engage in virtual networking with sponsors and your colleagues using the appointments feature to schedule video chats with them, in-app messaging, and chat and discussion features.

We are incredibly thankful to our sponsors who have generously returned to support us again this year as well as new sponsors who are joining us for the first time. Please take time to connect with these sponsors through the in-person as well as the virtual exhibitor booths.

On behalf of the CIRPA Board and the Conference Organizing committees, we look forward to an exciting hybrid meeting that promises inspiring conversations and enjoyable social interaction.

We very much hope you enjoy the conference!

Stephanie McKeown, CIRPA President

Move Forward

Applicant Studies
Alumni Research
Brand Health Reviews
Departmental Reviews
Marketing Materials Testing
Program Feasibility Studies
Stakeholder Surveys
Strategic Enrolment Management
Strategic Planning
Student Life & Housing Consulting
...and more

You have big goals for your institution.
We can help you reach them.

Since 1997, we have worked with Canadian colleges, polytechnics, and universities to improve their processes, strengthen their offerings, and stay on the cutting edge of major trends.

Learn why we are the Canadian postsecondary sector's most trusted partner.

Let's work together to **move higher ed forward.**

 **Making Data Make Sense**

Plaid is an independent agency that helps higher education institutions better understand and benefit from their student enrolment management data.

Plaid builds strategic enrolment management and planning solutions to help higher education make data-informed decisions in planning their future. With over 3 decades of strategic and operational experience in higher education, we understand the needs of academic institutions and have a proven track record of success.

 **Data & Analytics Solutions**

-  Automated data pipelines
-  Higher education data warehouses
-  Enrolment forecasting and tuition projections
-  Data governance tools

Industry Partners

Plaid works with world-leading product partners who provide platforms for those interested in improving how higher education uses data.

Take your institution to new heights

Research Intelligence for every step of the research lifecycle

“Now we are a high-level research activity university, and with that new designation, we really wanted some way to output what we’re doing and promote our scholarly output. Having Pure and Digital Commons really helps us to showcase what we do.”

— Karen Ramsden, Research and Projects Specialist, Montclair State University, USA

Research Intelligence

Elsevier’s Research Intelligence solutions combine quality, structured, interoperable data, advanced analytics and an array of indicators and metrics to provide research executives with key insights to address critical challenges and expand research excellence.

Research Strategy

Expertise & Collaboration

Research Funding

Conducting Research

Research Management

Impact & Engagement

Enhance your reputation for research excellence and advance open science by increasing research interactions and profile visibility. Demonstrate your impact by connecting research output to individuals, departments and your institution.

Pure

The world’s leading research information management system that enables evidence-based decisions, simplifies research administration and optimizes impact, reporting and compliance

Digital Commons

A cloud-hosted turnkey institutional repository, research data, and publishing platform to openly share and track the impact of the full spectrum of research and scholarship produced by your faculty, students and staff

Scopus

An expertly curated abstract and citation database with content from 7,000+ publishers to help track and enhance researcher and institutional data and discover global research in all fields

SciVal

A web-based analytics solution with unparalleled flexibility that provides access to the research performance of over 20,000 academic, industry and government research institutions and their associated researchers, output and metrics

CITY OF BURNABY
OFFICE OF THE MAYOR
MIKE HURLEY
MAYOR

GREETINGS

On behalf of Burnaby City Council, I am pleased to welcome you to our community for the CIRPA 2022 hybrid conference, hosted by the Canadian Institutional Research and Planning Association.

After two years of online-only conferences, we are honoured to be hosting the first hybrid CIRPA conference in Burnaby, bringing together a diverse group of research professionals to share their knowledge and skills. And, as we continue to navigate the realities of living with COVID-19, I'm excited to hear that CIRPA is continuing to offer online seminars, making this conference extremely accessible for people from all walks of life.

Burnaby is the ideal place to host the 2022 CIRPA conference, as our community is quickly becoming a hub for research and innovation. Burnaby is home to two of Canada's top post-secondary institutions, Simon Fraser University and the British Columbia Institute of Technology, as well as growing number of high-tech companies and start-ups.

I hope you'll find some time to discover the incredible depth of culture in Burnaby, and to explore the parks and green space that Burnaby is known for.

Thank you to the organizing committee and to all the attendees for visiting Burnaby. We hope to see you again soon.

Enjoy the conference!

Sincerely,

Mike Hurley
MAYOR

Unlock successful journeys

Engage students, faculty, staff and alumni like never before. Discover the experience improvements that deliver the outcomes that matter most.

THEME & TRACKS

The theme for CIRPA-ACPRI 2022 is *The Evolution of IRP – New Directions in Post Secondary Education*. This year, we are looking to the future as we celebrate the evolving landscape of institutional research and planning, and the innovative and creative work occurring in post-secondary institutions across Canada and beyond.

After two years of hosting the conference online, this year's tracks spotlight our in-person location, the city of Burnaby, and its many natural and urban attractions.

Burrard Inlet

LEADERSHIP, PARTNERSHIPS, AND PLANNING

Named after the calm waters of Vancouver's primary port, this topic area includes presentations of IRP practices in leading, supporting and/or informing institutional planning efforts, as well as the development of partnerships across the organization to support and inform decision making. Leadership development within the Institutional Research & Planning unit is also included in this topic area.

Deer Lake

RESEARCH METHODS

Named after the lake at the centre of arts and culture in Burnaby, this topic area includes presentations that are scholarly, theoretical, and/or focused on broad understandings of higher education issues or research/analytical methods. Emphasis is on methods or data sources, rather than individual institution decisions.

Brentwood Tower

TOOLS & TECHNOLOGY

Named after the tallest building in Burnaby, this topic area includes technologies used in conducting IR studies and in supporting data-based decision making. Examples include data storage, manipulation, and analysis; dissemination of results (e.g., dashboards, scorecards, fact books); automation of reporting; and other technologies that support IR, institutional effectiveness, and assessment.

Metrotown

IR OPERATIONS

Named after the largest mall in BC, this topic area focuses on the day-to-day work and management of Institutional Research & Planning. This includes the functions and activities we engage in, and how they are changing and evolving into the future. This topic area also includes presentations of IRP work conducted to support institutional decision making. Presentations may focus on methodology, data sources, analytics, or results that inform decision making.

GET CONNECTED!

Virtual attendees - Your home base for this year's conference is: <https://cvent.me/mX5gmy>

Simply log in from any web browser with your first name, last name, and email you used to register for the conference, then input the verification code you will receive by email or text. Find session details, build your personalized schedule, learn from our sponsors at virtual booths, and connect directly to all the sessions. To enhance your networking experience schedule appointments to meet virtually with other attendees. You can also supplement your experience with the app described below.

In Person attendees - Support your conference experience with the app! Download the "Cvent Events" app to your mobile device or tablet from the App Store or Google Play. Within the app, search the event ID "acpri Cirpa 2022" to find the 2022 conference event. Login with your first name, last name, and email you used to register for the conference, then input the verification code you will receive by email or text to view more details. In addition to finding conference details, this is where you will review sessions and where you can make appointments to meet virtually with other attendees.

KEY INFO:

- Using a web browser (not the app) on your desktop or mobile device to connect to the conference hub is the only way to join sessions.
- Review all sessions you attend to help with the selection of the Best Presentation Award winner.
- Network with other attendees and sponsors using appointments, messaging, and chat features.
- Whichever way you connect, be sure to play the game to earn points. Whoever tops the leaderboard at the close of the conference will win a prize!

2023 Survey of Middle Years Students

Get feedback from your institution's middle years Bachelor students

How do their expectations of university compare to their experience?

How often do they participate in campus activities?

How much has experience at your university contributed to their growth and development?

How are they financing their education? How much debt do they have?

How committed are they to completing their program at your university?

What do they think of their experiences with faculty?

How satisfied are they with facilities and services?

What are their future plans – career or further education?

What steps have they taken to prepare for employment after graduation?

** This year's survey includes an Equity, Diversity, Inclusivity, and Accessibility module **

Student insights with a different perspective.

To register for membership, the 2023 survey, and for more information about CUSC-CCREU, survey procedures, prices, and survey questions, visit

CRYSTAL BALLROOM

Ian Cull

University of British Columbia (retired)

How My Relationship with Institutional Research has Contributed to Informing Campus Decision-making and Planning During a Time of Significant Growth

Institutional Research has a set of skills, gifts and attributes that can significantly contribute to the student experience and to the general well being of the institution. Student and Academic Affairs need the expertise that IR has to be able to develop and improve their programs and services. In relationship with campus partners, IR has the capacity to support the work of the institution in an important way beyond its traditional reporting role. Ian will share from his own experiences at UBC how his relationship with IR has contributed to informing campus decision-making and planning during a time of significant growth.

@cull_ian

/in/ian-cull-960b8716

Ian Cull is now retired from the University of British Columbia.

Prior to his retirement he worked as Senior Advisor to the Deputy Vice Chancellor and Principal on Indigenous Affairs.

He served as Associate Vice President, Students, at the University of British Columbia from 2005 to 2015. He was the Senior Student Affairs Officer at the Okanagan Campus and was responsible for a large portfolio of services for students.

Previously Mr. Cull served as Vice President (Students) at the University of Winnipeg, as Dean of Students at St. Francis Xavier University in Antigonish, Nova Scotia, and as Director of Counselling Services and Services for Native Students at Lakehead University in Thunder Bay, Ontario

Mr. Cull is a member of Dokis Indian Band located on the Dokis Indian Reserve in Ontario, Canada.

Lyn Bartram
SFU

Beyond the Numbers: Visually Thinking with Data

Traditional analytics methods struggle with the highly variable and multidimension nature of “big data”. In this talk I will discuss how we harness the power of the human brain through interactive visualization, and how visual analytics can augment and extend our toolbox of ways to think with and about data for richer understanding.

 sfu.ca/~lyn

 viva.sfu.ca

 lyn@sfu.ca

Lyn Bartram is Professor in the School of Interactive Art and Technology at SFU and Director of the Vancouver Institute of Visual Analytics, an SFU Research Institute engaging researchers, practitioners and organizations with challenges and opportunities in the emerging universe of big data. Her work explores the intersecting potential of interactive visualization, cognitive analytics, computer graphics and computational media from both theoretical and applied perspectives, particularly to better support data-enabled thinking beyond the traditional applications of expert data science.

JEDI Data: Justice, Equity, Diversity, and Inclusion

The fight against systemic discrimination and the commitment to advance justice, equity, diversity, and inclusion (JEDI) across postsecondary institutions has translated in increased requests for demographic information about students, faculty, and staff. Practitioners must grapple with this challenge and search for ways to reconcile formal approaches to data collection and analysis with an evolving understanding of the needs to support JEDI and fluidity in definitions, terminology, and context. During this workshop, participants will have an opportunity to learn important concepts that are central to JEDI as well as guiding principles to JEDI data collection, as we share lessons learned from our work in this area. Since learning and integrating JEDI into our day to day lives is a personal journey, enriched by shared experiences and collaboration, the topic will be discussed using a participative and reflective approach.

An Introductory Workshop on Data Transformation, Statistics and Reporting with R

In recent years, the statistical programming language R has become one of the foremost open source technologies in data science. Institutional researchers can take advantage of this language and related tools to build capacity in data management, analysis, and visualization. In this hands-on workshop, bring your laptops and we'll walk you through the whole process, right from installing the software you'll need to analyzing data. No previous experiences with R or programming is necessary. Participants will be able to take home materials from the workshop to continue honing their skills.

Leading Through Change: From IR Analyst to Business Architect

When dealing with broad and complex problems, the skills of an Institutional Researcher often need to be elevated to level of Business Architect. A Business Architect is a senior strategic role responsible for business transformation and overseeing critical deliverables and assessing business capabilities, whereas an Analyst is typically more focused on the solution of specific problems across different domains (data, finance, research, etc.).

Assigning NOC Codes to College Programs Using Machine Learning

In order to provide insights and comparisons between application and enrolment trends with labour market trends, it is essential that the pathways between program learning outcomes and associated labour market occupations is defined. A working group of individuals from the Ontario Ministry of Colleges and Universities, several Ontario colleges, Statistics Canada, and OCAS was established to assign both CIP and NOC codes to individual college programs. A machine learning model was developed leveraging this new dataset to both backfill NOC assignments to college programs not included in the dataset, and to facilitate with NOC assignments for future programs.

Early Identification for Academically At-Risk Students

Student success is critical to improve retention and graduation rates. Fanshawe College piloted machine learning to integrate data from the Student Information System (SIS) and Learning Management System (LMS) and provide early identification of academically-at-risk students enrolled in the first term of a program. Findings showed early and consistent student engagement with weekly LMS course content significantly enhanced successful completion of that course. We overview the methods used to provide prediction, identifies key LMS metrics, and discusses possible academic and student service enhancements that can optimize course-level success for students enrolled in the first term of a new program.

**Impact of COVID-19 on Canadian Post-Secondary Students: A Systematic Review of Institutional Reports**

This case-study research involved a systematic review of institutional surveys and reports related to the impact of COVID-19 on post-secondary students from 31 post-secondary institutions and organizations across Canada. The results of the analysis are presented in the form of a Tableau dashboard. The dashboard was developed with the goals of creating a multi-jurisdictional repository of survey reports, summarizing survey findings, and providing a resource that could be used by post-secondary institutions for designing surveys in the future.

**DataOps in Higher Education**

As our data products become more complex and more operational in nature, the processes around building, maintaining and supporting those products should evolve as well. In recent history, changes around software development methodologies have resulted in faster deployments, more stable products, better communication, automation of repetitive tasks and greater agility in the overall business. How can we learn from these approaches and apply them to Institutional Research? As the proportion of code and therefore maintenance of code increases, what can we learn from industries which are doing this daily and apply it to our own?

Disaggregating Health Survey and Clinical Appointment Data to Understand the Health Status of Students on Campus

This presentation will showcase a tool developed for Dalhousie Student Health & Wellness Centre that disaggregates health survey and clinical appointment data. The tool—which is a Tableau dashboard—was developed to help the Centre understand how historically underrepresented groups are faring and the extent to which they access student health services. The presentation will also describe how the tool has impacted decision-making and what techniques were used to prepare the data and develop the dashboard.

The Power of Words: Using Student Feedback & Text Analytics for Advancing Qualitative Analysis in IR

As institutions continue to experience constant change during the pandemic with remote course delivery and student experience, the need for community feedback has become essential to understanding the challenges facing university students and the institution. Although this feedback is imperative for institutional planning, there are resource limitations in analyzing open-ended feedback from timeliness to the level of depth. This presentation will share the advancement of context-driven qualitative analysis and data visualization of institutional survey results at the University of Guelph, from where we began to where we are now in collecting timely feedback for university decision making.

Strengthening Enrolment With Market-Aligned Programs

In-demand academic programs that align with learners' goals are the foundation of effective enrollment and retention strategies. The good news is, the same data used to develop these programs in the first place can (and should!) also be used to communicate their value to prospective students.

In this session, you'll learn the "why" and "how" of aligning programs with labor market trends, and leveraging that alignment to market programs more effectively. Join us for an overview of recent trends, key data points to consider, and strategies for putting that data to work.

Data, Metadata and Digital Transformation

York University is undergoing a major digital transformation of student systems at the same time as we are making efforts to mature the Data Governance model. One of the key places where these two initiatives intersect is the Data Cookbook. The Data Cookbook has served as a business glossary, a metadata repository and a place to store data models.

This presentation will describe our experience collecting metadata and using the cookbook, the strategies we employed, and the lessons we learned. The Data Cookbook will be used for demonstrations, but the focus will be on the process not the tool.

Developing and Testing an Impacts Assessment Framework Using Decentralized and Unstandardized Data: The Case of Work-Integrated Learning Experiences in British Columbia (BC), Canada

This project's objective was to develop a framework consisting of domains, subdomains, and indicators to assess the impacts of work-integrated learning experiences on host organizations and the local BC economy. Five main domains were identified: 1) talent development, 2) productivity, 3) innovation capacities, 4) diversity & equity, and 5) community development & economic impacts. Each of these domains contain a series of subdomains and indicators. The framework and its indicators were tested via a survey tool to assess measurability, relevance, and comprehensibility piloted with seven BC post-secondary institutions. The presentation will look at the framework development process and its pilot testing.

Leveraging NLP (Natural Language Processing) to Process and Aggregate Institutional Surveys

Institutions recognize the importance of survey data to support strategic initiatives, but the effort to process and integrate them remains a significant barrier in the ability of IR teams to share reports and dashboards leveraging institutional surveys.

This presentation outlines our current approach to processing and aggregating survey data using NLP algorithms under the hood, but with a simple no-code survey tagging interface. We conclude the session sharing how it all comes together through an end-user Tableau dashboard. Join us if you are interested in exploring analytics tools for replicability as a strategy to provide timely data with limited resources.

**How Recent Changes in Student Progression May Impact Future Enrolment and Academic Outcomes**

The Maritime Provinces Higher Education Commission (MPHEC) monitors enrolment, persistence and time-to-degree in Maritime universities. In Fall 2020, the COVID-19 pandemic impacted enrolment in unexpected ways. Overall enrolment in the region remained stable and the persistence of students already enrolled in university was high, but student course loads decreased. Pulling together information on student course load and time-to-degree observed in past cohorts, this presentation examines university enrolment trends during the first full year of the pandemic and the potential impact on universities and different groups of students in upcoming years.

**Turning Data into Actions (+ discussion)**

The Business Intelligence and Analytics (BI&A) team at SAIT embarked on a new initiative to intensify our coaching role and implement a unique workshop series to advance institutional data literacy. BI&A has invested many years developing a comprehensive repository of business intelligence dashboards only to find that campus consumption has been lacking. In response, we adapted our mission: to make SAIT fall in love with data. In this session we will share our design for the “Turning Data into Actions” workshops, the challenges and the successes of this culture-shifting journey.

**Enrollment Planning with Power BI**

Strategic Enrolment Management has become increasingly important to all Post-Secondary Institutions. At Bow Valley College we have integrated learner data with financial data and leveraged Power BI to provide the data to inform strategic planning along with relationship and consensus building across diverse areas (ex. Academic, Marketing) through workshops and training.

By working collaboratively and presenting data in an easy to consume format, we're better able to set strategic, data-informed goals, monitor progress, and pivot quickly when the unexpected occurs. The lessons learned and agility developed may help other CIRPA members in their own SEM processes.

Elsevier supporting Research Analytics – Use Cases

Research in higher education is highly competitive and collaborative and to succeed, you need information that supports strategic decision-making. Institutions rely on tools for resources, information, and insights that support leveraging data to enable strategic decisions. This tool set includes databases, analytics, workflow tools, repositories, institutional portals, RIM systems, and custom analyses and metrics. Elsevier has carefully developed a portfolio of solutions, enabling technologies, and connected data that can accurately reflect the breadth and depth of research at your institution. This presentation will showcase some uses cases that have been adopted by universities to support research strategy and analytics in higher education. For eg: Supporting universities in their Open Science strategy using Data Monitor and reducing administrative workload.

**Mining NSSE Data for Insights: Case Study from SFU**

SFU's NSSE results have remained stable despite efforts to improve student engagement. Using data from SFU NSSE surveys from 2014, 2017 & 2020 and the Queen's National Project, we try to address questions such as: What are important predictors of student satisfaction among Canadian institutions and how does SFU compare? Which characteristics of an institution (or a student) and which NSSE indicators predict overall satisfaction and critical engagement indicators? Here we present regression analysis to show how institutions could get more out of their own NSSE results to identify specific areas that could help boost student engagement.

**“We may not be big, but we’re small:” Optimizing the Small IR Office**

This presentation will provide specific, practical tips on optimizing the one- or two-person Institutional Research office drawn from the presenter's two decades of experience providing an IR function in a small liberal arts university. The presenter will identify the characteristics of an effective IR office and explain how even the smallest office can capitalize on the advantages of diminutive size to achieve them. Topics will include clarifying and refining the mandate of the IR office, improving reusability and consistency of reports, strategies for reducing workload, and tactics for broadening institutional awareness of the purpose and value of the IR office.

**Beyond Dashboards: How We Changed the Fabric of Decision Making**

Years in the making, Sheridan's integrated suite of intelligence tools has transformed leadership's ability to consistently make quality decisions in high stakes situations, and brought IR to the fore in terms of visibility, credibility and import. In the post-pandemic era of change and disruption, this work has tangibly improved our ability to successfully identify and adjust to changing market conditions. Beautifully designed and built on myriad interconnected data sets and custom predictive models, the suite covers all aspects of the institution's business – from enrollment planning to program performance to the competitive landscape – allowing users to quickly identify, contextualize and surface issues and opportunities. In this presentation we take you from specific visualizations to big picture – including the development and implementation of our client 'consulting model' – reviewing concrete examples of how these tools drive success, and demonstrating how we delivered on our promise to accelerate decision making with more than 'just another dashboard.'

The Past, Present, and Future of Enrolment Projections at Thompson Rivers University

Thompson Rivers University spans three campuses and offers a variety of undergraduate and graduate programs. Enrolment projections are produced for all campuses several times a year using different modelling strategies and incorporating consultation with stakeholders. Over the past decade, the projections process has evolved from a simple model of accepted applications to student headcounts by program and enrolments by course. Here, we provide an overview of the individual models and the process of incorporating stakeholder feedback. We describe how the projections are used for institutional planning at TRU, and how their next evolution can contribute to an enrolment planning framework.

Making Your Survey Analysis Less Full of S*** (SPSS, Stata, SAS, or any software package beginning with S): An Interdisciplinary Journey

Survey analysis and reporting using SPSS (or any other statistical software package) may meet the gold standard for statistical robustness, but leave us spending time copying and pasting cross-tabs into reports. Survey dashboards that incorporate weighted survey data – such as data from the National Survey of Student Engagement (NSSE) – and inferential statistics are a better alternative, but how do you coordinate a mix of survey specialists and business intelligence professionals to produce them? This presentation will explore UCalgary's journey across disciplinary boundaries to incorporate R into our workflow and build survey research and data science literacy.

Strategic Analytics to Maximize Revenue and Increase Diversity at Rio Hondo College

Rio Hondo College is a California Community College located in Whittier, CA, near Los Angeles. In 2021 Rio Hondo College began a project aimed at recovering from the COVID-19 pandemic by maximizing revenue and supporting the growth of the College's diverse student population. In partnership with Plaid Analytics, Rio Hondo built an automated data pipeline, data warehouse, and various strategic and operational Tableau visualizations to allow real-time decision-making. Data was brought in from many different institutional systems including the Banner SIS, DegreeWorks, student appointment systems, and accreditation tracking and monitoring, and was augmented with additional data.

Listen, Understand and Act: Mobilize Your Survey Data to Meet Real Time Needs

Whether an annual survey or end of course evaluation, students are inundated with requests for solicited feedback. Ironically, research shows 85% of feedback is unstructured and unsolicited. Without the right tools, institutions could be missing the majority of student feedback. Campuses need an omnichannel approach to capture a holistic view of their students. Join us as we share examples of universities who found new ways to listen to their students and drive the outcomes they care about.

Student Pathways into Ontario College's Bachelor Degrees: Patterns of Mobility, Student Characteristics, Academic and Labour Market Outcomes

Surveys previously indicated that almost 40% of Ontario's college degree students report previous college or university experience. In support of this, colleges have a range of pathways into degrees, including preparatory programs, course credit, bridges, and block transfer. This project, through accessing administrative records at five colleges, determined how often these pathways are utilized, who is using them, and how students are faring academically and in the labour market. Preliminary results showed that over half of degree entrants had documented previous post-secondary experience; with 20% entering the degree through a block transfer (advanced level). As well, transfer students, particularly block transfers, are successful academically, often outperforming non-transfer students.

Tableau and Oracle and R, oh my! A Deep Dive into Enrolment Projections at Thompson Rivers University

Thompson Rivers University spans three campuses offering a variety of undergraduate and graduate programs. In this presentation, we take a deep dive into the technical tools used to produce headcount and enrolment projections for our Kamloops campus. The process uses a series of Tableau Prep flows that connect to our Oracle data warehouse to determine current student headcount by program and year. These students, plus predicted incoming students, are moved through programs via observed retention rates using R scripts connected to the flow. In a separate flow, headcounts are transformed into course enrolments through the application of a course matrix.

Building a Culture of Data Literacy to Support Continuous Quality Improvement

Many people don't feel empowered to work with data and technology for reasons that may include complicated technologies, a lack of skills or confidence, or a lack of institutional data use processes. These barriers result in limited use of evidence to drive decisions related to quality and continuous improvement of academic programs and student services. This presentation will discuss Humber College's approach to eliminating these barriers in support of a culture of quality across the institution. The discussion will focus on two main areas: our processes for enhancing data and technology knowledge and utilization, and the tools developed to engage employees in using data to gain insights.
